

Wednesday 6th May 2020

Good morning Class 5! It's Woden's day (Wednesday) today.

Well done for all the hard work – keep it up!

Friday's answers:

Maths

All/Most

1. How many days did the plant take to grow 8cm?
14 days.
2. What is the height difference between Wednesday 17th and Tuesday 23rd?
4cm.
3. What is the height of the plant on these days:
Thursday 11th **6cm**
Friday 19th **10cm**
Monday 29th **19.5cm**
4. Why do you think there is no measurement in the first week?
The plant has not grown in the first week.

Some

1. How many days did the plant take to grow 18cm?
27 days.
2. What is the height difference between Friday 19th and Thursday 25th?
7cm.
3. What is the height of the plant on these days:
Thursday 11th **6cm**
Friday 19th **10cm**
Monday 29th **19.5cm**
4. Why do you think there is no measurement in the first week?
The plant has not grown in the first week.

Today's work:

History/ English- VE Day Activity

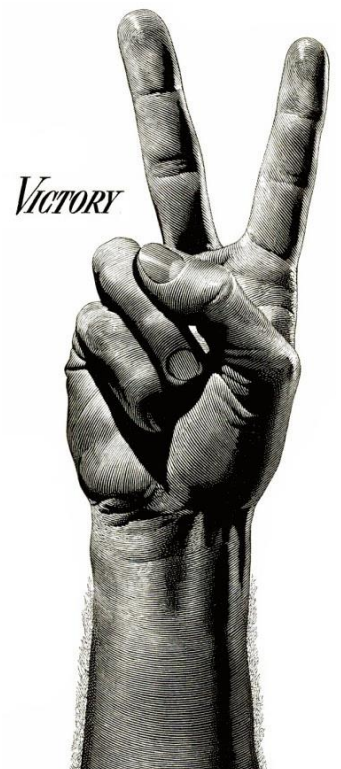

Imagine you were a child of your age on the 8th May 1945, the day which victory was declared over Nazi Germany (VE Day). **Write a diary entry of the celebrations of that day.**

Remember when writing a diary entry it needs to be in first person, can be informal and usually includes many emotions.

Think about what you would have seen that day. How did you celebrate? How did you hear the news of the victory? Maybe your father was fighting in the war and you are glad he will be returning home.

You can watch VE Day celebrations here to give you some ideas:

<https://www.youtube.com/watch?v=GuhnGbkvu8o> (until 2.30)

Maths

Today we will be finding the missing angles on a straight line. Remember there are 180 degrees on a straight line.

Choose a difficulty (All, Most or Some).

ALL

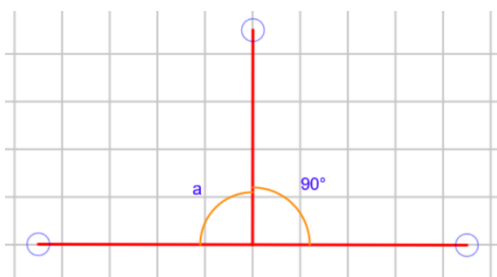

Remember to subtract the known angle from 180 degrees.

For example, on number 1 you simply need to subtract 90 degrees from 180 degrees.

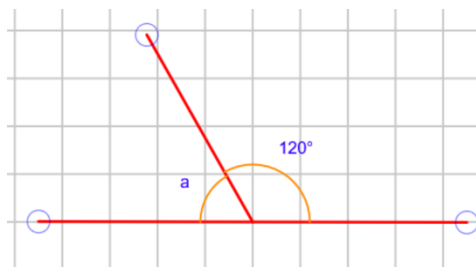

$$180 - 90 = 90$$

a is 90°.

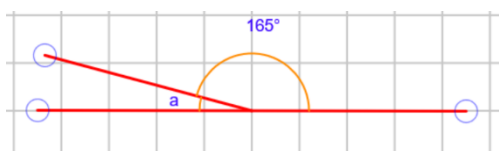

1.

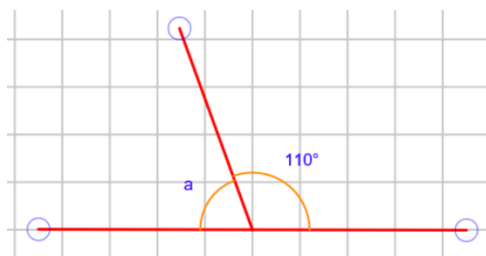

2.

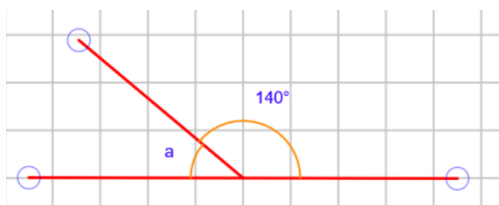

3.

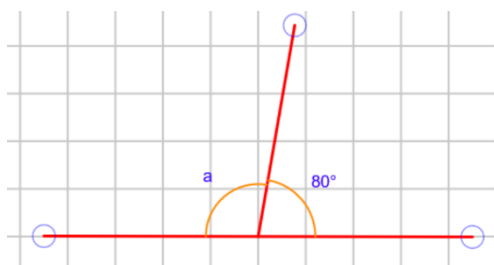

4.

5.

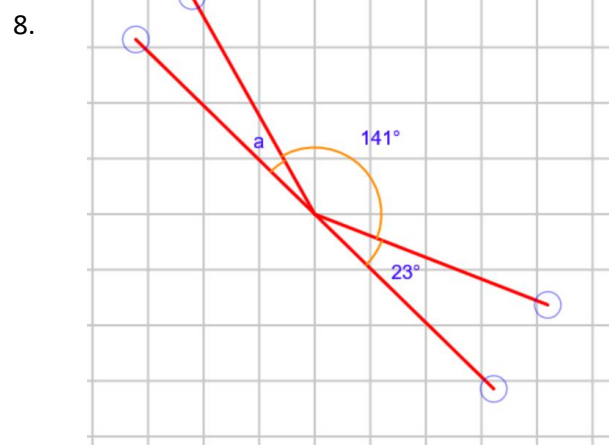

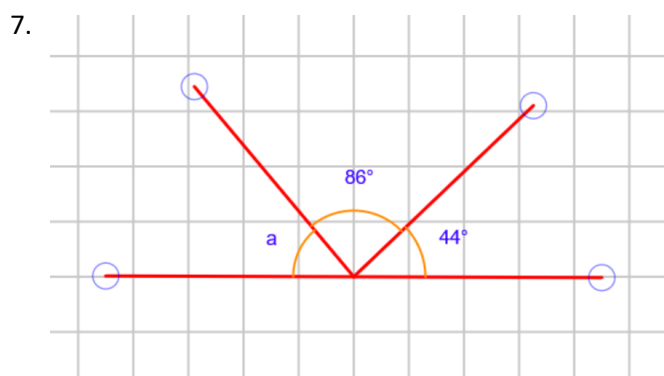

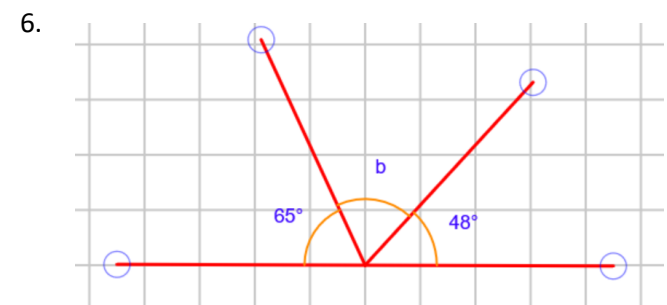

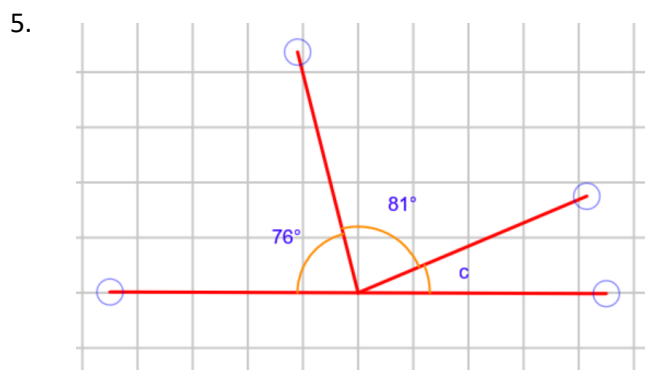

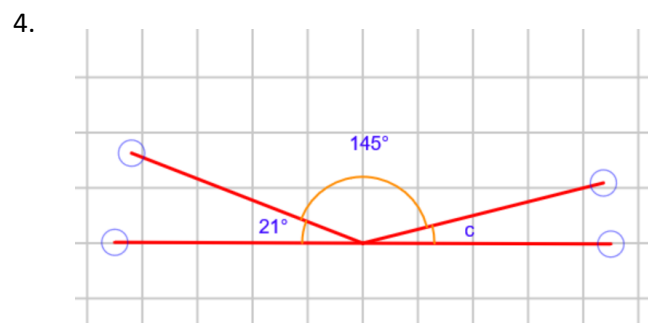

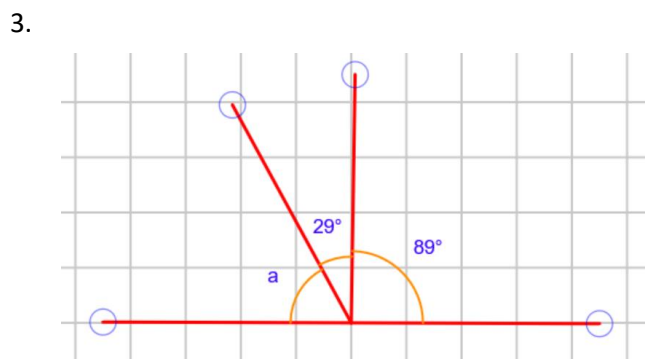

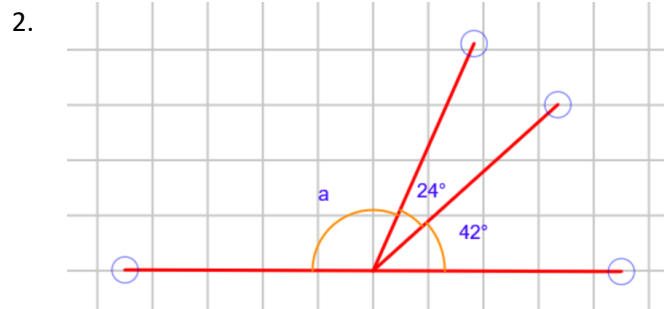

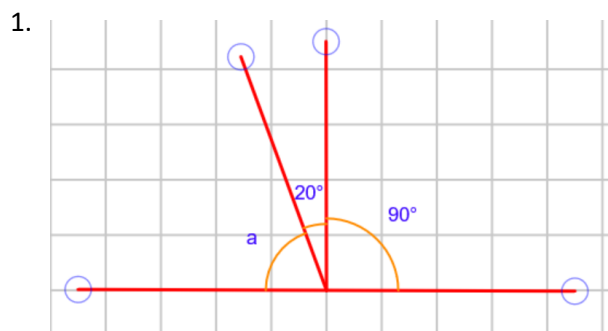

6.

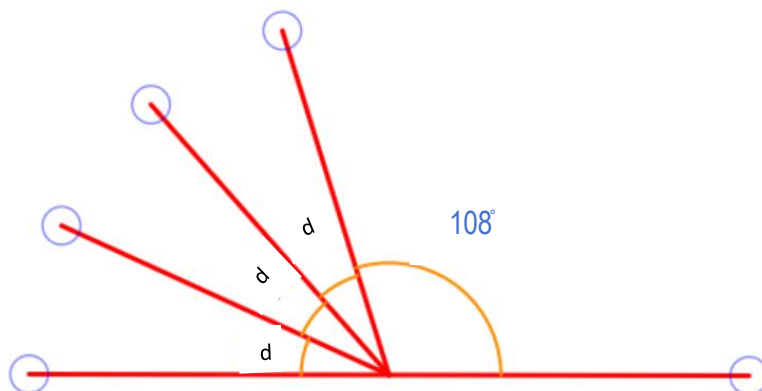

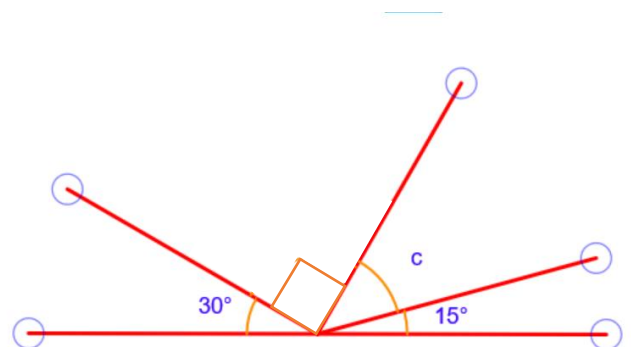

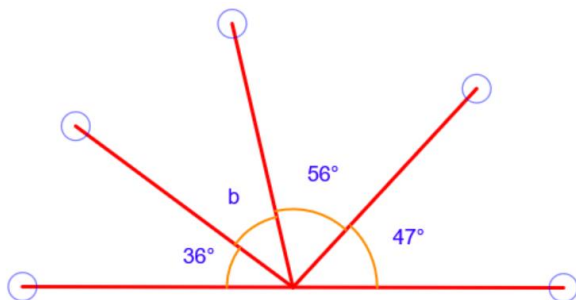

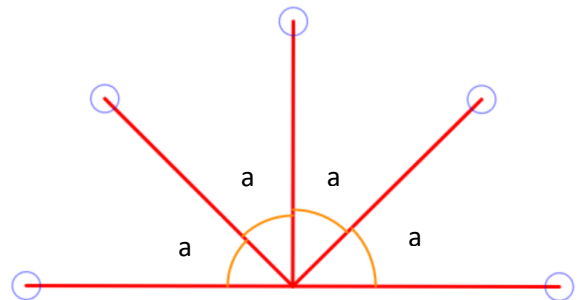

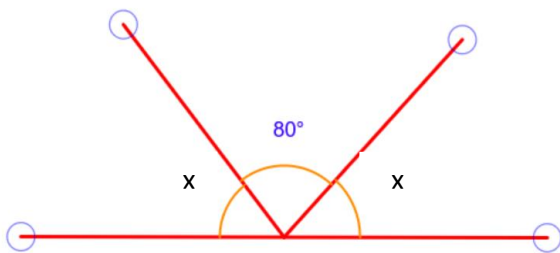

MOST

Remember all the angles add up to 180° .

SOME

Find the values of the missing angles. They are tricky! Remember all of the angles add up to 180 degrees. If there is more than one angle of the same letter, they are the same size.

Geography

Today we will recap countries in Europe. Label the map with as many countries in Europe as possible.

I know many of you will not be able to print the map so I have labelled some countries with a letter so you can just write the answers in your book. For example, a = United Kingdom

Alternatively, you can complete this activity on this website: https://www.toporopa.eu/en/countries_of_europe.html
